contracthero.dev

I make hard stacks teachable: from vocational classrooms to bootcamps, hackathons, docs, video and developer tooling. Four years as a lead teacher in technical colleges, then smart contracts on Flow and Sui, now the solutions role at the Sui Foundation where both matter at once: multi-day bootcamps and train-the-trainer for community instructors, hackathon workshops and judging, video tutorials, partner support, and the open-source tooling that came out of it (sui-pilot, the Flow token standards).

EXPERIENCE

Solutions Engineer — Sui Foundation, remote

Oct 2025 – present

- **Sui Builders Bootcamp:** five days of Move and Sui plus a one-day hackathon for pre-selected cohorts of 30–40 developers; delivered in Ankara, Bucharest and Paris, and online. At every bootcamp, trained the local community ambassadors to run the following editions on their own.
- **Hackathons:** lead Sui's sponsorship at ETHGlobal New York and Lisbon 2026 (800+ hackers each), EncodeHub London and online hackathons of 100+ developers each (one for Eve Frontier builders): define workshop and prize tracks, deliver the workshop live, mentor teams all weekend, judge submissions.
- Review Move smart-contract implementations built for supported partners; on-call technical support for exchange and DEX partners (triage, troubleshooting, escalation).
- DeepBook developer experience: sandbox evaluation, reference snippets, and a hands-on course. Video tutorials for the Walrus Foundation.
- **Spearheaded AI adoption** in the solutions engineering team: Claude Code as the daily tool, with the plugins and MCP servers that ground it in the Sui stack. Built **sui-pilot**, an open-source Claude Code plugin for Sui/Move, on the plugin pattern Vercel published.

Smart Contract Engineer — freelance, remote

Sep 2023 – Sep 2025

- Ported the Band Protocol oracle from Solidity to Cadence on Flow: testnet, mainnet-ready, then Cadence 1.0 (onflow/band-oracle-contracts).
- Upgraded Celer cBridge and auxiliary contracts to Cadence 1.0; suite audited by Oak Security. Built Trade Wars, a fully on-chain multiplayer trading game on Sui.

Smart Contract Engineer — Dapper Labs, remote

May 2022 – Feb 2023

- Authored the **Fungible Token Switchboard** (one receiver capability for any token) and the **Fungible Tokens Metadata FLIP** with its FungibleTokenMetadataViews contract; both part of the Flow FT standard, deployed on mainnet (onflow/flow-ft, 138★).
- Linked-account (hybrid custody) contracts for walletless onboarding; six docs PRs to onflow/cadence; drafted the Cadence Style Guide FLIP. Flow Certified Developer.

Technical College Lead Teacher — Department of Education, Madrid & Valencia

2017 – 2021

- Coordinated the teaching team of each school: aligned every subject to the official programme, kept each teacher on the agreed syllabus and pace, tracked student objectives. Four schools, 60–120 students a year: OOP and SQL fundamentals, networks, web programming, systems administration.

Full-Stack Developer — Bolsas y Mercados Españoles (Spanish Stock Exchange), Madrid

2014 – 2017

- B2B electronic trading platform for institutional brokers over FIX; cut transaction processing time by 20%.

EDUCATION & SKILLS

Master's in Teacher Training, URJC Madrid, 2017 — thesis: programming education through video games.

Bachelor's in Telecommunication Engineering, Technical University of Madrid, 2013.
